NIGRAH Manipulation Pattern Framework (MPF v1)

Core Principle

A scam is rarely defined by a single signal.

Instead, scams emerge from combinations of signals working together to manipulate investor behavior.

For example:

```
Guaranteed Return
+
Urgency
+
Social Proof
```

is more dangerous than any one signal alone.

NIGRAH therefore introduces a second layer:

Manipulation Patterns

These represent recurring psychological attack mechanisms observed across multiple scam families.

Pattern 1

MP-01 Authority Exploitation

Definition

The attacker creates perceived expertise, legitimacy, or regulatory credibility to reduce skepticism.

Primary Signals

- TS-03 Fake Authority
- TS-04 Impersonation
- TS-05 Unregistered Entity
- TS-23 Deepfake Authority

Examples

- Fake SEBI advisor

- Fake analyst
- Fake broker
- Fake fund manager
- AI-generated expert videos

Risk Formula

```
Authority Score

=
(TS03 × 0.35)

+
(TS04 × 0.35)

+
(TS05 × 0.15)

+
(TS23 × 0.15)
```

Why It Matters

Authority is one of the strongest persuasion mechanisms because investors outsource trust to perceived experts.

Pattern 2

MP-02 Greed Engineering

Definition

The attacker amplifies reward expectations while minimizing perceived risk.

Primary Signals

- TS-01 Guaranteed Return
- TS-02 Unrealistic Return
- TS-17 Escalating Investment

Examples

- Double money schemes
- Daily return scams
- High-return Telegram groups

Risk Formula

```
Greed Score

=
(TS01 × 0.40)

+
(TS02 × 0.40)

+
(TS17 × 0.20)
```

Why It Matters

Nearly every major investment fraud contains a greed component.

Pattern 3

MP-03 Pressure Engineering

Definition

The attacker reduces decision time.

Goal:

Prevent verification.

Primary Signals

- TS-06 Urgency
- TS-07 Scarcity
- TS-08 FOMO

Examples

- Last chance
- Closing soon
- Only today
- Limited seats

Why It Matters

Scammers want action before analysis.

Pattern 4

MP-04 Social Validation Manipulation

Definition

The attacker substitutes evidence with perceived popularity.

Primary Signals

- TS-09 Social Proof
- TS-10 Community Pressure
- TS-14 Lifestyle Projection

Examples

- Profit screenshots
- Rich lifestyle videos
- VIP groups

Why It Matters

Humans often trust groups more than facts.

Pattern 5

MP-05 Trust Harvesting

Definition

The attacker creates emotional trust before introducing financial requests.

Primary Signals

- TS-11 Trust Building
- TS-12 Exclusivity
- TS-13 Reciprocity

Examples

- Free mentorship
- Personal coaching
- Free trading tips

Why It Matters

Many scams begin as relationships rather than transactions.

Pattern 6

MP-06 Information Asymmetry Exploitation

Definition

The attacker deliberately makes verification difficult.

Primary Signals

- TS-19 Non-Transparency
- TS-20 Complexity Shield
- TS-21 Rumor-Based Information

Examples

- Secret strategy
- Insider source
- Proprietary AI model
- Hidden methodology

Why It Matters

Victims cannot verify what they do not understand.

Pattern 7

MP-07 Financial Entrapment

Definition

The attacker gradually increases investor commitment.

Primary Signals

- TS-15 Payment Diversion
- TS-16 Withdrawal Restriction
- TS-17 Escalating Investment
- TS-18 Borrow-to-Invest

Examples

- Deposit more funds
- Pay tax before withdrawal
- Upgrade VIP tier
- Take loan to invest

Why It Matters

This is where major losses usually occur.

Pattern 8

MP-08 Opportunistic Targeting

Definition

The attacker targets individuals without prior trust relationships.

Primary Signals

- TS-22 Unsolicited Contact

Combined with:

- Authority
- Greed
- Urgency

Examples

- Random WhatsApp message
- Cold call
- Unknown Telegram invitation

Why It Matters

Many scams begin with unsolicited outreach.

Pattern 9

MP-09 Digital Identity Manipulation

Definition

The attacker creates false digital legitimacy.

Primary Signals

- TS-04 Impersonation
- TS-23 Deepfake Authority
- TS-24 Fake Trading App

Examples

- Clone websites
- Fake apps
- Deepfake advisors

Why It Matters

This category is growing rapidly because of AI.

Pattern 10

MP-10 Network Expansion Manipulation

Definition

The attacker uses victims as acquisition channels.

Primary Signals

- TS-25 Referral Pyramid
- TS-10 Community Pressure

Examples

- Bring 5 investors
- Earn referral commissions
- Network growth rewards

Why It Matters

This transforms fraud into a self-scaling system.

The NIGRAH Pattern Vector

This is the first truly novel part.

Every scam can now be represented as:

```
[
Authority,
Greed,
Pressure,
Social,
Trust,
Information,
Entrapment,
Targeting,
Identity,
Network
```

```
]
```

Example:

```
Fake SEBI Advisor

[9,8,4,3,5,6,2,4,8,1]

Telegram Pump-and-Dump

[2,10,8,9,3,4,5,6,2,3]

Fake Trading App

[6,9,7,5,6,7,10,4,9,2]
```

First Mathematical Innovation

Now NIGRAH can compare scams using vector similarity.

Instead of:

```
This text matches a scam.
```

We can say:

```
This content has 92% similarity
to the Fake Trading App family.
```

This is much more explainable.

Why This Matters

At this point we have:

Layer 1

Threat Signals
